

SecuGATE

How quickly can your telephone turn into a tapped phone?

Today's landline telephones are easier to tap than ever before. And these days even the indicated caller number can be forged with a little technology and know-how. Even if you are extremely careful about what you are saying on the telephone, the wrong person just might be listening.

The problem: You have to be able to hold a conversation without worrying about security. How much longer can you afford to wait before being able to make 100% secure calls?

seamless secure communication

secu**smart**

SecuGATE is the Solution

Landline telephone calls via SecuGATE are secure. The hardware-based encryption and authentication allows you to always know exactly with whom you are speaking – and that no one can eavesdrop. The only condition: Your conversation partner must also be using either SecuGATE or SecuVOICE, the solution for secure mobile communication.

As easy as usual

- Usual convenience
- Safeguard of existing landline telephone devices
- No increased call charges
- Secure telephone conferences possible between mobile telephones and landline telephones
- Securing of Public Branch Exchange (PBX)

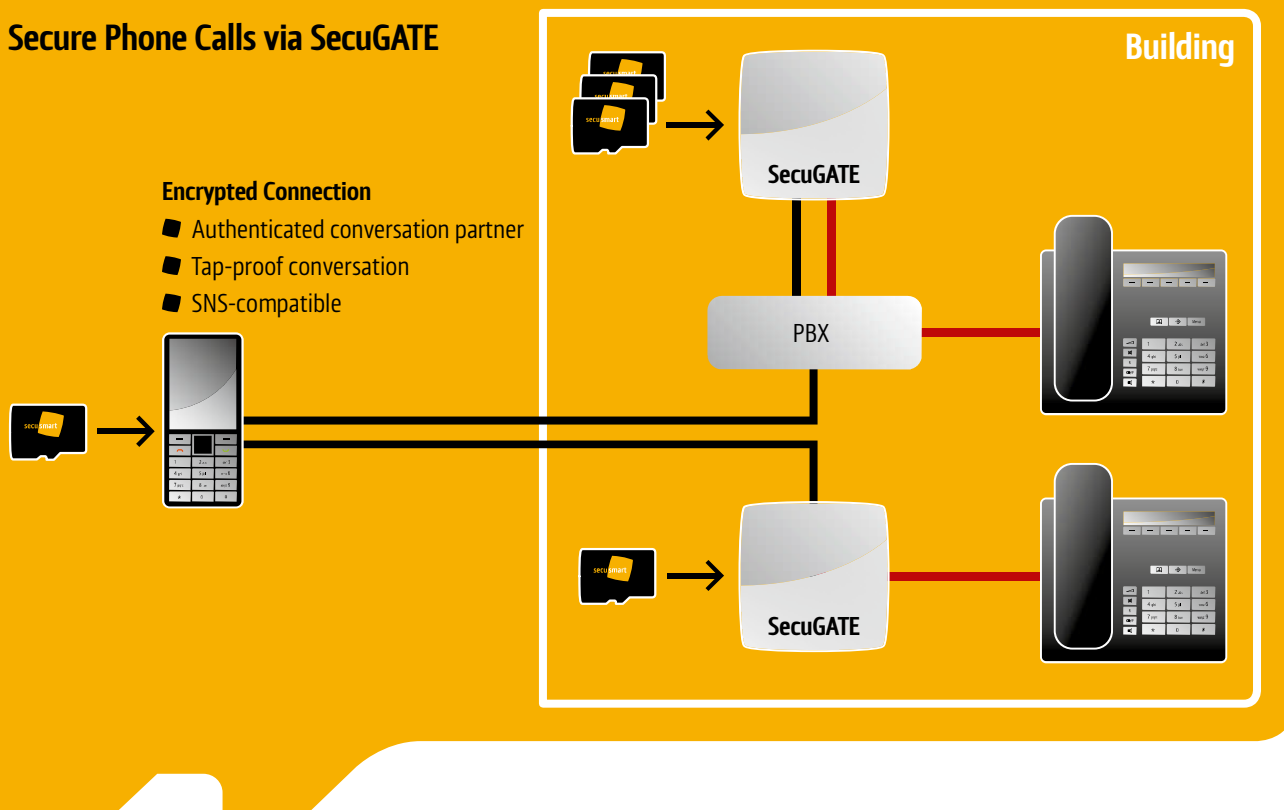

Small Box, Big Effect

SecuGATE is a gateway which protects either your telephone connection or your telephone system. It contains a tamper-proof crypto unit which facilitates a maximum level of security as well as unambiguous identification.

More secure than ever

- Hardware solution using Elliptic Curve Cryptography (ECC)
- Certificate-based subscriber authentication
- End-to-end voice encryption using 128-bit AES
- Fast Diffie-Hellman key agreement using ECC
- Certificate-based key authentication for protection from man-in-the-middle attacks

Secure Phone Calls via SecuGATE

Encrypted Connection

- Authenticated conversation partner
- Tap-proof conversation
- SNS-compatible
