

SECUREMAIL

Mobile E-mail: Highest Security, Easy Operation

Mobile e-mails are a must in today's world of communication. They do, however, contain high risk potential. Hardware-based, assessable encryption for transport and archiving is the answer.

Just how long will you keep relying on unsecure e-mails?

seamless secure communication

SecuEMAIL Protects Your Secrets

SecuEMAIL protects your e-mail using hardware-based encryption. It additionally facilitates the encrypted synchronization of your contacts and calendar as well as secure archiving of your data.

The SecuSUITE combines secure e-mails, SecuVOICE and SecuSMS and thus protects all areas of mobile communication within one secure application.

- Easy operation
- Modular structure facilitates easy integration into already existing IT infrastructure
- Supports leading mail background systems (Lotus Notes, MS Exchange, ...) as well as push e-mail
- Compatible with many modern mobile phones

Small Card, Big Effect

Encryption and authentication is carried out via the Secusmart Security Cards within the SecuGATE E-Mail. This SecuGATE is simply integrated into the IT environment of your company or government office and encrypts the e-mail before it leaves the secure area, which is still protected by existing measures such as firewalls or virus scanners.

- Hardware solution using Elliptic Curve Cryptography
- Hardware encryption of data using 128 Bit AES
- Certificate-based authentication for protection from man-in-the-middle attacks
- Currently undergoing licensing procedure for VS-NfD and NATO Restricted security levels

Secure E-mail Encryption
