

## Secure Voice Communication for BlackBerry® Smartphones

BlackBerry® smartphones dominate business communication. You have to protect your voice communication just as much as you do your mobile e-mails.

Can you really risk having your phone tapped?

seamless secure communication

## Make Phone Calls As Usual – But Securely

All phone calls between SecuVOICE users are hardware-encrypted and the participants are identified unambiguously. Moreover voice quality stays crystal clear via VoIP. SecuVOICE can be used with all contracts that support VoIP.

### As easy as usual

- Excellent voice quality
- Suitable for BlackBerry® smartphones (OS 5.0 and higher)
- Simple and intuitive operation

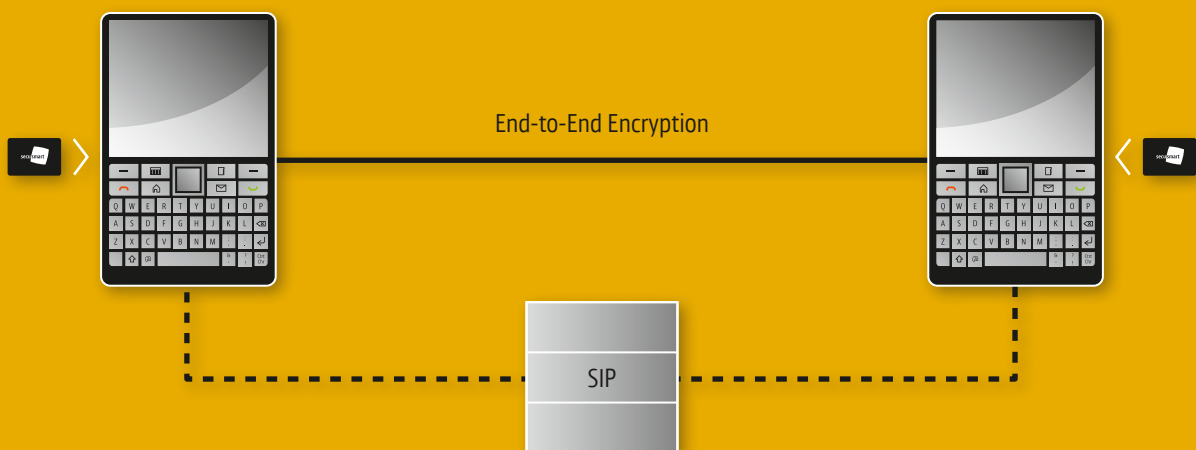

## Small Card, Big Effect

Thanks to the Secusmart Security Card, SecuVOICE facilitates highly secure hardware cryptography with simultaneous authentication. All processes for encryption and decryption are carried out fully enclosed within the secure hardware, providing a maximum level of security.

### More secure than ever

- Hardware solution using Elliptic Curve Cryptography
- Certificate-based user authentication
- End-to-end encryption of call data using 128 Bit AES
- Certificate-based key authentication for protection from man-in-the-middle attacks

## Secure Smartphone Communication

### SIP Alternatives :

- Secusmart Internet Service (SIS)
- Secusmart Enterprise Server (SES)
